The ThoughtSpot Support team is committed to making you successful when deploying and using ThoughtSpot, regardless of your location. We provide 24x7 worldwide support to all our valued customers.

The reliability of your business is very important for us. This document describes our Support offerings, so you can find resources to resolve your issues, and answer your questions.

Support Roles

We have distinct roles in ThoughtSpot Support, and understanding them helps you to streamline issue resolution.

Systems Reliability Engineer (SRE)

Thank you for choosing ThoughtSpot.

Your cases are assigned to the SRE team, your main contact for providing support. Their primary goal is improving your user experience from a service management perspective. The SRE responsibilities include:

- Responding to support cases through the Support website, by email, or by phone
- Reproducing reported issues, as necessary
- Researching, identifying, and resolving product technical issues
- Working with other ThoughtSpot teams to resolve issues.

SRE Manager

The role manages the team, and steps into the role of Escalation Manager when necessary.

Escalation Manager

If the issue is not progressing to your satisfaction (based on normal case lifecycle process expectations), the Escalation Manager is engaged. Escalations can be initiated by either the customer or the SRE. The Escalation Manager:

- Coordinates resources to diagnose and resolve the issue, including third parties, as needed
- Ensures that regular updates are shared with internal and customer stakeholders

• Ensures that issues are resolved to the best possible satisfaction of all stakeholders

Support Components

We have a multifaceted approach to ensure the success of ThoughtSpot deployments.

Support Cases

We help you resolve product issues through our online support case management system.

Alert Monitoring

ThoughtSpot product implements an intelligent alerting system that sends regular system status reports and alerts to ThoughtSpot Support when it encounters critical events. These notifications prompt SREs to engage and resolve all ThoughtSpot issues.

Metrics and Diagnostics

The ThoughtSpot product records application and system metrics and sends these to ThoughtSpot Support. These metrics provide the SRE team with visibility into capacity and system resource usage and allow them to prevent or quickly resolve issues.

When working on cases, ThoughtSpot Support may collect diagnostic information on the system, and also request that you share the information with us. You can securely share the diagnostics with us through our secure ThoughtSpot File Server.

Remote Access

To help with diagnosing the issues, and to perform administrative tasks such as software upgrades, ThoughtSpot Support needs remote access to your system. This access may include using a web browser to view ThoughtSpot service status pages, or starting an SSH session to execute Linux commands on ThoughtSpot nodes.

For ThoughtSpot Cloud clusters

The ThoughtSpot Support team doesn't have access to your Cloud instance's graphical user interface. We count on your availability to understand the user experience through our web-conferencing solution. Please make sure that you have web access to ThoughtSpot nodes.

For ThoughtSpot Software clusters

ThoughtSpot Support provides the option to initiate the Reverse SSH Tunnel (RST) to establish a secure connection between ThoughtSpot nodes and the ThoughtSpot tunnel server. You have complete control to initiate, monitor, or stop the secure tunnel session. This is the preferred

method to obtain remote access as it doesn't block customer resources and helps in efficient resolution of the issue especially in case of round-the-clock effort being needed.

If RST is not possible for any reason, ThoughtSpot Support will use internet-based facilities, such as Zoom, for remote access. Please make sure that you have web and SSH access to ThoughtSpot nodes.

File Server

ThoughtSpot File Server is a secure way of sharing files, like diagnostics information files or software packages for performing updates. Only valid users can access the file server.

Product Updates

Customers can request the latest version of ThoughtSpot or ThoughtSpot Support may recommend updates as the resolution to an issue. ThoughtSpot Support will work with you to schedule and perform product updates. As part of the update process, you'll have to download the software package from a secure ThoughtSpot File Server.

For cloud customers, ThoughtSpot automatically performs Cloud Release updates on a monthly basis. ThoughtSpot Support performs the upgrade; we will notify you in advance.

In- App Support

To enhance your support experience, ThoughtSpot now offers In-App Support for all Cloud customers. This feature provides immediate assistance for product-related inquiries and "how-to" questions directly within the ThoughtSpot application.

Accessing In-App Support

To initiate a live chat with our Product Specialists:

- 1. Click the question mark icon in the upper right corner of the top navigation to open the help menu and select *Contact Support*.
- 2. When the chat window opens, select ***Send us a message*** to begin.

Our live chat begins with an AI bot designed to quickly address your questions. If the bot cannot provide a solution, it will seamlessly connect you to a Product Specialist for personalized assistance.

Availability

In-App Support is available from Sunday 8:00 PM PT through Friday 6:00 PM PT, ensuring support throughout the business week.

When to Use In-App Support

We encourage you to utilize in-app support for:

- General questions about ThoughtSpot features and functionalities.
- Guidance on training and "how-to" scenarios.
- Assistance with common issues that can be resolved quickly.

For more complex issues requiring in-depth investigation specific to your instance, please submit a support case through the ThoughtSpot Community.

If your issue cannot be resolved via live chat, our team will guide you on how to escalate the matter appropriately.

We are committed to providing you with timely and effective support to ensure your success with ThoughtSpot.

If you encounter a technical issue, you can notify ThoughtSpot Support using the "Report an issue" sub-menu.

Support Case Management

ThoughtSpot Support Portal

You must have a valid ThoughtSpot Community user to access the Support Portal. If you're not signed up yet, please click on "Sign Up" and follow the instructions to register and receive access.

Create a New Support Case

You can create a new support case through the Support Portal, or over the telephone. ThoughtSpot Support recommends that you use the Support Portal for reporting issues, especially critical ones.

To create a new case, log into the ThoughtSpot Community website, and click Submit Case.

Please provide all required information in the web form. You may notice that on the left side of the form, under **Need Answers Fast?**, we suggest Knowledge Base articles that match the keywords in the **Subject** and **Description** you provide. Click on the suggested articles to see if they help you to resolve your situation quickly.

Close Case

ThoughtSpot Support works with you to determine if the issue is resolved to your satisfaction, and closes the case. A case may be closed if we don't hear from you within two weeks after a request for information, and when we made multiple attempts to contact you during this period.

Case Category and Assignment

All cases reported to ThoughtSpot must have a category. The category establishes the case assignment rule.

Category	Assignment
Issue	Systems Reliability Engineer
Feature Request	Customer Success Representative

Case Priority

Case priorities help us understand the real impact of an issue on your business, so we can determine the urgency of our initial response. For each error, assign a priority level based on the relative impact the error has on your use of ThoughtSpot in your organization. ThoughtSpot may re-assign the priority level at its sole discretion. In the following table, we describe ThoughtSpot Support priority levels and the corresponding target initial response times.

Priority	Description	Initial Response Level
P0	The Production instance is unavailable; all users are blocked and productivity has stopped.	Within 1 hour
P1	The Production instance is available; functionality or performance is severely impaired.	Within 2 hours
P2	The Production instance is available and can be used with partial, non-critical loss of functionality, or the production instance has an occasional issue that the Customer wants to be identified and resolved. Requests for help on administrative tasks.	Within 4 hours
P3	Cosmetic issues, or requests for general information about the ThoughtSpot Cloud, Documentation, process, or procedures.	By next business day

Case Escalation

You can escalate a case at any time by requesting through the case that you would like to escalate and an SRE Manager be engaged. We recommend that you provide the escalation reason and the business impact, so that we can appropriately prioritize the escalation. Escalations occur when case progress or issue resolution is not in line with your expectations relative to the prescribed case resolution process. The SRE Manager serves as the Escalation Manager until we resolve the issue to your satisfaction.

About ThoughtSpot

ThoughtSpot is the Modern Analytics Cloud company. Our mission is to create a more fact-driven world with the easiest to use analytics platform. With ThoughtSpot, anyone can leverage natural language search and Al to find data insights and tap into the most cutting edge innovations the cloud data ecosystem has to offer. Companies can now put the power of their modern data stack in the hands of every employee, extend the value of their data to partners and customers, and automate entire business processes. ThoughtSpot's web and mobile applications improve decision-making for every employee. With ThoughtSpot's low-code development platform, customers can also embed consumer-grade analytics into their SaaS offerings or build entirely new interactive data apps that engage users and keep them coming back for more. Organizations like Walmart, BT, Daimler, Medtronic, Hulu, Royal Bank of Canada, Nasdaq, OpenTable, Metromile, Workato, and Nationwide Building Society rely on ThoughtSpot to transform how their employees and customers take advantage of data. See for yourself and try ThoughtSpot today.
